

[FINAL DOCUMENTATION PACKAGE - EXAM SESSION SUBMISSION]

PROJECT TITLE: UVT Campus Fix - Institutional Ticketing System

COMPANY: Not applicable - academic project (UVT, FI)

COMPANY COORDINATOR: Sebastian Stefaniga, sebastian.stefaniga@e-uvt.ro

TEAM LEADER: Paunchici Raian, raian.paunchici06@e-uvt.ro

TEAM MEMBERS:

Paunchici Raian (raian.paunchici06@e-uvt.ro)

Horia Bociat (horia.bociat05@e-uvt.ro),

Andrei Herlo (andrei.herlo05@e-uvt.ro),

Denis Molete (denis.molete05@e-uvt.ro),

Izabella Hanos (izabella.hanos04@e-uvt.ro).

DATE: 24/06/2026

1. FINAL SYSTEM ARCHITECTURE

- Insert final system diagram.
- The system leverages a modular architecture where the GLPI Core serves as the central engine for ticket lifecycle management. A custom plugin [uvtcampusfix](#) extends GLPI functionality to support QR code-driven ticket submission and real-time AI classification. The ML classification service, built with Python and FastAPI, processes ticket descriptions via REST API to ensure accurate routing. All components are orchestrated via Docker Compose for a seamless, consistent environment.

2. TECHNOLOGY STACK

- **Frontend:** GLPI Native UI with custom Plugin pages (Tailwind CSS, Chart.js, qrcode.js) — Chosen for lightweight, high-performance UI extensions.
- **Backend:** PHP (GLPI Plugin API) — Necessary for native deep integration with GLPI's established ticketing schema.
- **Database:** MariaDB 10.11 — Chosen for full compatibility with the existing GLPI database infrastructure.
- **ML Service:** Python 3.11, FastAPI, scikit-learn — Industry standard for robust, decoupled machine learning microservices.

3. DATABASE STRUCTURE

- Insert ER diagram or main tables + relationships. No long descriptions.

4. USER INTERFACE

Insert 3 - 6 key screenshots:

- Main Dashboard: Updated with UVT metrics and real-time statistics.
-
- QR Ticket Submission: The custom plugin form allowing automated location and asset identification.
-
- AI Classification Result: Ticket form displaying AI-suggested categories with confidence intervals.
-
- Analytics Dashboard: Visualization of category distribution and technician load via Chart.js.
-

5. ACCEPTANCE TESTS

Feature	Test Scenario	Expected Result	Result
QR Workflow	Scan QR code on room/equipment.	Ticket form auto-populates room/asset details.	Pass
AI Classification	Submit ticket with text "wi-fi nu merge".	ML service returns category "Rețea".	Pass
Graceful Degradation	Disable ML service connectivity.	Plugin allows manual category selection; ticket submitted.	Pass
Analytics Dashboard	Open dashboard page.	Data successfully queried from MariaDB and visualized.	Pass

6. UPDATED GANTT [PLANNED VS ACTUAL]

Insert updated timeline.

7. FINAL WORK TIME SUMMARY

Member	Total Hours
Paunchici Raian	28
Horia Bociat	26
Andrei Herlo	27
Denis Molete	25
Izabella Hanos	30

8. MINUTES REGARDING THE DISTRIBUTION OF SCORES WITHIN THE PROJECT TEAM

This document was concluded on 25/06/2026, following the project team meeting for the distribution of scores among team members. After the presentation of the Team Project titled "UVT Campus Fix - Institutional Ticketing System", the project received a final grade of [Grade], resulting in a total score of [N] points. After reviewing the contributions of each team member throughout the project, the team has decided to allocate the obtained score and the corresponding grades as follows:

No.	Function / Role within the Team	Last, First Name	Grade (integer)	Signature
1	Team Leader / DevOps	Paunchici, Raian	10	
2	Plugin Developer	Bociat, Horia	10	
3	Plugin Developer	Herlo, Andrei	10	
4	ML Engineer	Molete, Denis	10	
5	UI/Data Configurator	Hanos, Izabella	10	
TOTAL			.N. points	

Team Leader: Paunchici, Raian _____ (Date: 24/06/2026)

Company Approval: Stefaniga, Sebastian _____ (Date: 24/06/2026)
